Prosecution is being reopened under 37 CFR 1.198 in this application after decision of the Board of Appeals and by the authority of the director of Group 2800. A new reference was found applicable to the remaining claims 2-4.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-4 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Efland et al, 5,468,984.

Efland shows in figures 16 and 17 a protection device comprising diodes with a doped area 213 of a first conductivity type (N) in a first well 209 of a second conductivity type (P), a deep well 201/203 of first conductivity type (N) under the first well 209 isolating the first well from the substrate of second conductivity type (P). Accordingly claim 2 structure is anticipated by Efland. Alternatively the claim is also considered obvious over Efland because the functional language is not specifically recited by Efland; however, the ability of the Efland device to function in the manner claimed is an inherent property of the device, i.e. the diodes are reverse biased during normal operation and the device can conduct an overvoltage electrostatic discharge event

through the diodes in the forward manner. See *In re Swinehart* 169 USPQ 226, *Ex parte Minks* 169 USPQ 120 and *In re Pearson* 181 USPQ 641 where it was decided that functional language, statements of intended use, or mere labels do not structurally distinguish claims over anticipating prior art.

Claim 3 is rejected because 201/203 comprise a second well surrounding the first well 209.

Claim 4 is rejected as the first conductivity type is N type and the second is P.
